

May 06, 2019

To Whom It May Concern:

Parrot LLC hired me on February 2019 to perform technical tests, code review, infrastructure analysis, security tests, and quality assurance tests on their mobile app and their application server backend.

It was an outstanding experience working with Parrot LLC and the Techno Exponent team. Their code quality, coding standards, and scalable application design knowledge are exceptional. Such an initiative makes it possible to scale the application and the Parrot LLC development team as much as possible. Currently, the app can handle at least 200,000 concurrent users.

The mobile application performs as expected, the backend software & support (Amazon Web Services) are well thought out and scalable. Techno Exponent team are always very prompt in implementing any requirements or addressing any scope changes. The development team fulfills all requests within a very reasonable amount of time while adhering to strict coding standards and maintaining the functional quality of the application.

The parrot application gives a unique experience to its users. The sign-up process is quick and highly secure. Parrot LLC also takes an extra step to protect its users' privacy and their overall experience. The application security team installed various levels of security checks, scanning tools and AI-powered technologies to ensure that there's no nudity shared over the app and the application data are available only to the authorized parties.

Overall, it was a great experience working as a consultant for Parrot LLC and Techno Exponent. Their products and services meet the highest standards and strongly recommended for production use.

Sincerely,

A handwritten signature in cursive script that reads "Roosevelt R. Purification".
